Sequence of normal canine COLIA1 cDNA and identification of a heterozygous alpha! (1) collagen Gly208Ala mutation in a severe case of canine osteogenesis imperfecta.";

Arch. Biochem. Biophys. 384:37-46 (2000).

-!- FUNCTION: Type I collagen is a member of group I collagen (fibrillar forming collagen).

-!- SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.

-!- PTM: Prolines at the third position of the tripeptide repeating unit (G-X-X) are hydroxylated in some or all of the chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -!- DISEASE: Defects in COLIA1 are a cause of osteogenesis imperfecta

PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.

SIMILARITY: Belongs to the fibrillar collagen family.

SIMILARITY: Contains 1 WWFC domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             procollagen gene:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Showalter A.M., Pesciotta D.M., Eikenberry E.F., Yanamoto T., Pastan I., Decrombrugghe B., Fietzek P.P., Olsen B.R.;
"Nucleotide sequence of a collagen cDNA-fragment coding for the carboxyl end of pro alpha 1(I)-chains.";
FEBS Lett. 11:61-65(1980).
-!- FUNCTION: Type I collagen is a member of group I collagen
(fibrillar forming collagen).
-!- SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.
-!- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE-81160715; PubMed=6927845;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hydroxyapatite.

PTM: Proline residues at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains. Pro-1153 is the only 3-hydroxypro and the only hydroxylated proline in position X.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SIMILARITY: Belongs to the fibrillar collagen family. SIMILARITY: Contains 1 VWFC domain.
